Forecast for Thursday 08 Aug 2024

Weather: A widely damp and dreary day with overcast skies and periods of rain and drizzle. This will be persistent at times, especially in the west and south of the area and occasionally heavy.

Chance of cloud-free hill tops above 600m: Generally less than 10%, but 40% in the far north and east.

Low cloud and visibility: Extensive cloud above 300-400m throughout the day will give generally poor or very poor visibility on most hills. Moderate visibility in the valley bottoms at times, but often poor in periods of drizzle and rain. Cloud may break in the region between Brecon and Hay-on-Wye at times with the Black Mountains slightly more favoured for the odd brighter interval.

Valley	15/14	16/15	17/16	18/16	17/16	17/15	16/14
Freezing Level*	3400m	3600m	3800m	3700m	3700m	3600m	2800m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Extensive and persistent hill fog will give widely very poor visibility on Thursday and this will mean that navigation will be difficult, especially if crossing any featureless terrain.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
02:00 on Thu 08 Aug 2024	1mm	1.2mm	9.6mm

Forecast for Friday 09 Aug 2024

Weather: Any overnight rain and drizzle soon clearing to leave a much brighter day with frequent sunny periods. Still rather windy on the higher summits and ridges.

Maximum wind: Westerly 25-35 mph.

Chance of cloud-free hill tops 600m: 40-50% first thing, soon becoming 90%.

Low cloud and visibility: Patches above 500-600m until mid-morning but thereafter only a low chance of patches above 850m. Locally poor in any cloud first thing but otherwise very good visibility throughout the day with distant hills and landmarks clear to see.

Temperature: **Valleys:** Plus 12 Celsius rising to plus 22 Celsius.
At 600m: Plus 12 Celsius rising to plus 16 Celsius.
Freezing level: Well above the summits.
